1 List of Tables

To create a list of tables use the \listoftables{} command. The caption of each table will be used to generate this list.

Col1	Col2	Col2	Col3
1	6	87837	787
2	7	78	5415
3	545	778	7507
4	545	18744	7560
5	88	788	6344

Table 1: This is the caption for the first table

Col1	Col2	Col2	Col3
4	545	18744	7560
5	88	788	6344

Table 2: This is the caption for the second table

Table 3: Creating complex tables 1

2 Creating Complex Tables

Here we will see how to create complex forms of tables by incorporating various mathematical symbolic representations like τ , β, etc. Furthermore, we will see how to use both subscripts and superscripts involving exponents, indexes, and some special operators in the same mathematical expressions, such as $(\omega_8^{(nl)})$, $(\omega_{16}^{(nl)})$. Table 3 displays all of the types.

3 Assignment to be done

The following Table 4 is to be executed as an assignment.
